Art Unit: 1652

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 1-8 and 11, drawn to an oxalate deficient *A. niger* strain for the production of a given enzyme as well as a method of producing a given enzyme by said strain.
- II. Claims 9-10, drawn to a method for obtaining oxalate deficient *A. niger* strains.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature of groups I, II seems to be an oxalate deficient *A. niger* that has an ability to produce a larger quantity of a given enzyme i.e. any enzyme. Such a strain however is not a contribution over prior art, because, as indicated in the International Search Report and IPRP of this 371 application, document WO 00/50576 (enclosed in the IDS) teach an Oxalic Nonproducing Strain of *Asperillus niger* to be used for production of many enzymes. Also van den Hombergh et al teach use of UV irradiation for obtaining *Aspergillus* mutants (Curr. Genet. 1995, 28, 299-308, enclosed in IDS)

Art Unit: 1652

For the reason indicated above the restriction is proper.
